New Proteinase K from BLIRT

Proteinase K is a serine protease that exhibits a very broad cleavage specificity. It has been purified to be free of RNase and DNase activities. The stability of Proteinase K in urea and SDS and its ability to digest native proteins make it useful for a variety of applications.

OFFER:

RP102B

Lyophilized powder

1 g

FEATURES AND BENEFITS:

- Very high activity and purity
- Stable at high temperatures
- Molecular biology grade
- Broad-spectrum serine protease
- Active under denaturing conditions
